**DETAILED ACTION*****Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Allowable Subject Matter***

Claims 1-8 are allowed.

***Reason for Allowability***

The following is an examiner's statement of reasons for allowance: the primary reason for the allowance is the including, in combination with other limitations recited in the claims, the limitations *a magnet field type rotary electric apparatus comprised of a rotor and a cooperating stator rotatable relative to each other about an axis, one of said rotor and said stator being comprised of a plurality of circumferentially spaced permanent magnets and the other of said rotor and said stator having a plurality of circumferentially spaced pole teeth surrounded by coil windings, at least one of said plurality of circumferentially spaced permanent magnets and said plurality of circumferentially spaced pole teeth provided in an axial surrounded by coil windings being divided in an axial direction into a plurality of stages (n) each of which is circumferentially displaced around said axis at angular interval  $\Theta$  degrees relative to each displacement angle expressed as  $\Theta = 360 \text{ (degree)} / (A \times n)$ , where "A" is the least common multiple of the number of pole teeth and the number of magnets and "n" is plural stages (of the core).*

The Examiner concurs with the applicant's remark about none of the prior art references discloses the displacement angle  $\Theta = 360 \text{ (degree)} / (A \times n)$ , where "A" is the least common multiple of the number of pole teeth and the number of magnets and "n" is plural stages (of the core). Therefore, comparing to the prior-art of the record, none of the prior art references of the record, either stand alone or in combination, has taught or suggest the above-mentioned features in combination with other limitations recited in the claims.
